Abstract—NSU ClubHub is a centralized web platform designed for North South University students to manage and engage with clubs efficiently. It allows students to log in, explore clubs, view upcoming events, and apply for club positions from one unified portal. This report presents the complete redesign of the student dashboard to ensure a modern, responsive, and user-friendly interface. Currently, the system operates as a prototype using structured test data to demonstrate its functionality.

Index Terms—Club Management, Next.js, React, Website Redesign, Student Portal

I. INTRODUCTION

The primary objective of NSU ClubHub is summarized as: “One Portal. Every Club. All in One Place.” The system aims to centralize all student club activities into a single digital platform.

At the current development stage, the project operates using structured test data to simulate real-world functionality. The prototype includes:

- 9 sample clubs
- 7 upcoming events (March 2026)
- 5 recruitment roles
- 4 application status stages (e.g., Pending, Accepted)
- 5 sample notification alerts

II. TOOLS AND TECHNOLOGY

The platform was developed using modern and scalable technologies to ensure reliability and performance.

- **Framework:** Next.js 15 for optimized rendering and scalability.
- **Language:** React 19 with TypeScript for type safety and maintainable code.
- **Design Tools:** Tailwind CSS and shadcn/ui for a clean, professional, and responsive UI design.

III. DESIGN AND PAGES BUILT

Six major pages were newly designed and implemented. The visual design uses the Syne font for headings and Plus Jakarta Sans for readable body text.

The implemented pages include:

- **Login and Dashboard:** Secure login interface and a dashboard displaying announcements and open positions.
- **Club Pages:** Searchable club directory and individual club profile pages with descriptions and team information.

- **Calendar and Applications:** Interactive event calendar and a structured 4-step club application system.

IV. PROGRESS COMPARISON

Table I shows the improvements from the initial version to the current update.

TABLE I
CHANGES FROM UPDATE 1 TO UPDATE 2

Feature	Update 1	Update 2
Tools	React + Vite	Next.js 15
Language	JavaScript	TypeScript
Design	Basic CSS	Tailwind + shadcn/ui
Apply Flow	None	4-step structured form
Settings	None	Profile and password management

V. FUTURE PLANS

The next phase of development will transition the system from prototype to production-level implementation. Planned improvements include:

- Integration with Neon Postgres for secure database storage.
- NSU email authentication using NextAuth.
- Automated email notifications using Resend.

VI. CONCLUSION

NSU ClubHub is progressing toward becoming a fully functional university-wide platform. The transition from mock data to real authentication, live database integration, and automated communication will complete the core system objectives and enable practical deployment for North South University students.
